# 1 About MBI

#moometMBI

## The story of MBI

In over 80 years MBI has grown into a multidisciplinary company. Active in the production and distribution of materials for outdoor design. MBI innovates within sectors such as Construction, infrastructure, and Gardening with Steenmeesterschap, our knowledge of concrete, as its stable foundation. Characteristic to MBI is the extensive knowledge of stone-like materials such as concrete and ceramics.

## Core values MBI

Five core values guide everything we do at MBI. This applies to our collaboration and relationships with each other, but certainly also to our customers.

## Our mission

MBI's mission is to create a beautiful, comfortable and sustainable outdoor living environment, together with our partners, with as little negative impact on the environment as possible.

## Service

With our dedicated, expert Stone Masters we combine our knowledge. Our playing field is aimed at all areas of outdoor use: living, roads, shopping, working and wellbeing. MBI can be contacted during all stages of a project for advice. #moometMBI

## Quality

At MBI, we combine aesthetics with the durable qualities of concrete, so our products can be enjoyed for years to come without any worries. We strive for the highest possible quality with the lowest possible environmental impact, supported by craftsmanship and innovation. What's more, quality is not only evident in our products, but also our service. Each and every one of our Stone Masters has extensive knowledge of stone-like materials, such as concrete and ceramics.

## Sustainability

At MBI, sustainability is about more than environmental friendliness. Our policy focuses on five pillars: the product, the process, the function, the lifespan and safety. This way we ensure that our decorative paving is not only beautiful and reliable, but also durable, safe to use and sustainably produced. Thanks to craftsmanship, innovation and high-quality materials you can enjoy a garden that is not only aesthetically pleasing, but also sustainable for many years to come.

### Durable product, strong quality

MBI produces concrete with a focus on the environment. By using green energy, techniques for reducing cement use and recycled and natural materials, we lower the ECI value and Carbon footprint of our products. As a result, the emissions from the complete production chain have already been reduced with 35% percent, without compromising strength, aesthetics, or durability.

*“What characterizes our family business is the connection with the Stone Masters. Employees with over 30 years of service at MBI are very common. This gives MBI a unique, pleasant working atmosphere and allows it to take care of approximately 400 Stone Masters.”*

## Brands

Discover the differences between our brands

GEOCERAMICA® ASPEN BASALT, GEOSTEEN® GEOLINKER ROMA  
GEOSTYLISTIX SHADED GREY

### GeoCeramica®

#### The best of both worlds

Our high-end collection is a true all-rounder. GeoCeramica® combines stylish ceramics with a water-permeable Stabikorn® layer. This strong concrete base and integrated spacers make installment easy, quick, and relatively cost-effective. Furthermore, these garden tiles are suitable for any type of surface. A standard thickness of 4 cm makes these tiles suitable for gardens, balconies, and roof terraces. Even driveways can be paved with the GeoCeramica® 2Drive range.

### GeoSteen®

#### Colorfast concrete tiles with natural granulates

GeoSteen® makes up the foundation of our versatile product range. This concrete tile has a top layer consisting of colorfast, natural granulates. The tiles have grown into a separate category with their own unique advantages. Such as larger sizes than brick, better colorfastness than traditional concrete and better functional properties than natural stone. Lay a beautiful floor in your garden, balcony or roof terrace with the standard 4 cm version. Within the 2Drive range you'll find options for medium-duty and heavy-duty driveways. For future-proof, water-permeable paving we offer climate-adaptive paving.

### Basicsteen

#### Affordable concrete tiles with MBI quality

The Basicsteen is the entry-level stone in our range. These stones do not contain natural granulates in the top layer and instead have a top layer made of high-quality pigments. With roughly the same thicknesses Basicsteen offers a good alternative for GeoSteen®. This range includes the affordable Trippel T and Vialetta, but also basic versions of climate-adaptive paving like the EcoStrook Basic and Citta Klimata Basic. Don't let the name confuse you, Basicsteen offers the quality you can expect from MBI!

## The difference between ceramic and concrete

The range includes both concrete and ceramic outdoor tiles. Concrete has a natural appearance, is heavier and requires slightly more maintenance. While ceramic offers many design variations, is lighter, dimensionally stable, and low maintenance, but slightly more difficult to work with. GeoCeramica® combines the best of both worlds: a ceramic top layer on a concrete Stabikorn® base, resulting in a tile that is both beautiful and practical.

### *The right tile for your garden*

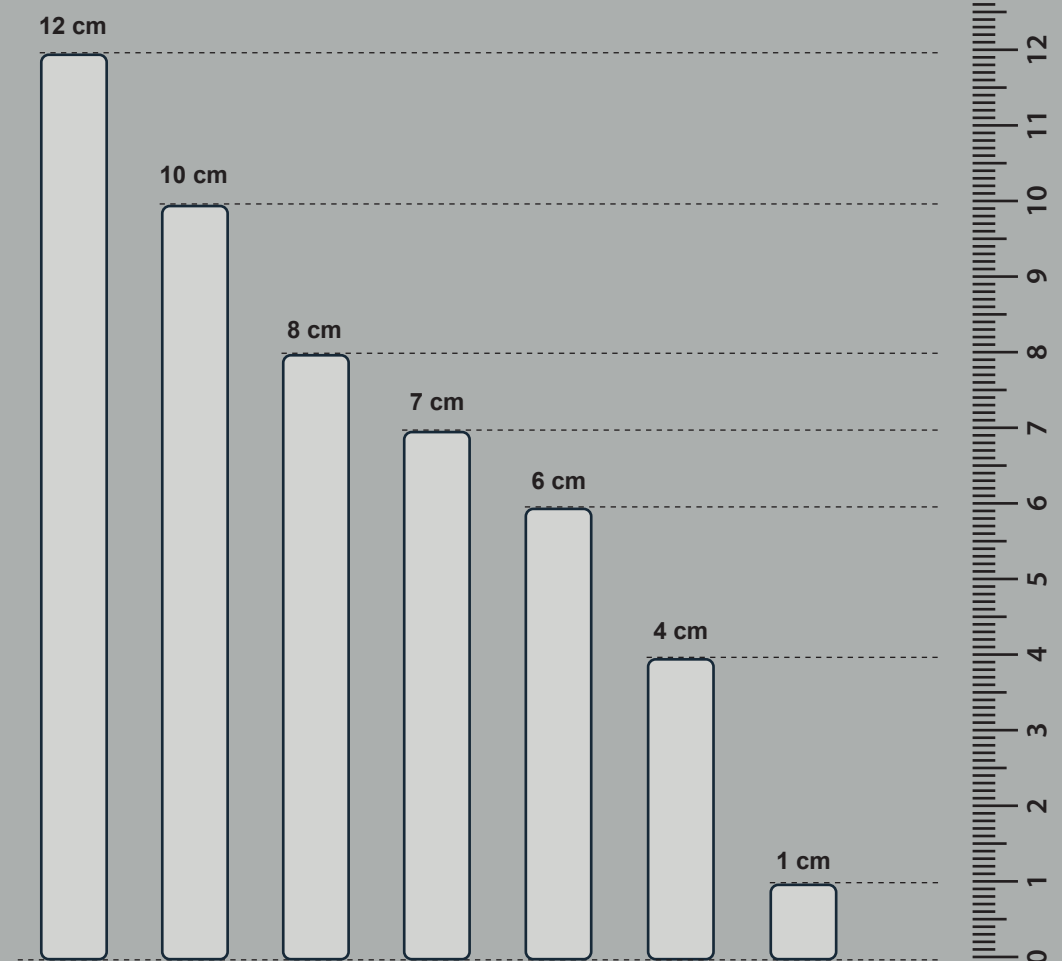

#### Ceramics:

- Extremely hard and wear resistant
- Stain- and acid-resistant
- Incredibly low-maintenance
- Guaranteed colorfast and UV-resistant
- Resistant to heat and frost
- Available with high slip resistance (and remains slip resistant)
- Up to 6 cm thick with Stabikorn®, suitable for heavy-duty

#### Concrete:

- Extremely hard and sustainable
- Weatherproof, resistant to heat and frost
- Easy to install
- Extremely strong and available in thick versions for heavy-duty
- Natural appearance, heavier and requires slightly more maintenance

## OUR TILE THICKNESSES AT A GLANCE

The wide range of products is available in various thicknesses. The thickness affects the installation, substrate and loadbearing capacity. The range offers tiles for the garden, terrace, balcony and even the driveway. For medium-duty the 6 cm version is sufficient, 8 cm is available for heavy-duty. Make sure to choose the right thickness for your project or contact us for further advice.

## Legend

#### Product features

- Easy to clean**  
Treated for easy cleaning
- Footcomfort®**  
Pleasant to walk on

## GeoCeramica®

GeoCeramica® was created with one goal in mind: to produce a high-quality, stylish, durable tile with minimal environmental impact. Both bricks and traditional ceramic tiles need to be fired. This process is energy-intensive, and the thicker the tile, the higher the CO<sub>2</sub> emissions. GeoCeramica® offers the solution. A thin top layer of high-quality ceramic combined with a concrete base. This concrete Stabikorn® base consists of sustainable and recycled raw materials and hardens without heating. The result is a tile that can be used to create a flexible, high-quality, and sustainable terrace. That is the power of GeoCeramica®.

### Labels

#### POINTER

Discover how quality and price come together in the Pointer label. Choose from contemporary, trendy designs in a very affordable range. Enjoy the refined look that the different designs of these tiles give to your garden.

#### STARTER

The Starter label is the ideal basis for your outdoor space. Choose a concrete, stone, or wood look in one of the five available sizes. Create the right atmosphere with Starter tiles.

#### ENTREE

The Entree label offers concrete and natural stone looks that allow you to create the perfect balance of tranquility and texture in your outdoor space. Enjoy the simplicity and nuance of the tiles within the Entree label.

#### PURE

By far the most versatile and extensive GeoCeramica® range can be found under the Pure label. From large, minimalist, neutral tiles to small, vibrant designs. The Pure label has something for every taste and application.

#### PREMIUM

The most technical masterpieces can be found under the Premium label. Thanks to the most advanced techniques, these designs are unrivalled. Enjoy unparalleled luxury with the Premium label.

GEOCERAMICA® MENSOLA OAK, WALK SAND

# 10-YEAR GEOCERAMICA® ANNIVERSARY

GEOCERAMICA® EVOQUE GREIGE

GEOCERAMICA® GRANDE NAPOLI

## The best of both worlds

Ten years ago, MBI introduced GeoCeramica® to the market for the first time. A true revolution in decorative paving, GeoCeramica® seamlessly combines functionality with style and character. It is a tile that fits into any garden, from modern to rural. At MBI, we are celebrating this milestone with new colors, styles, and the proven quality of GeoCeramica®.

GEOCERAMICA® TIMBER NOCE

## Dutch craftsmanship with Italian ceramics

What makes GeoCeramica® so unique is that it combines the best of both worlds: a water-permeable concrete base layer with a high-quality ceramic top tile. AquaFerm® creates a strong bond between the layers as soon as they come into contact with water. GeoCeramica® is easy to install on most substrates. The integrated spacers ensure that the tiles are positioned correctly and that the top layers do not touch each other.

## Sustainable, functional, and low maintenance

The ceramic top layer is colorfast, scratch and wear resistant, stain and acid resistant, and low maintenance. This means you can enjoy a garden that not only looks beautiful, but is also practical and durable for many years to come. Technology, aesthetics, and ease of use come together perfectly here.

## 10 years of proven quality

Since its launch, 9 million m<sup>2</sup> of GeoCeramica® have been produced. The success lies in the appearance, versatility, and performance of the tile. GeoCeramica® is available in many designs and sizes and is suitable for both light use and heavy duty thanks to the different thicknesses. This ensures that your garden remains beautiful and reliable for many years to come.

**GERMAN  
DESIGN  
AWARD  
WINNER  
2026**

## AN OVERVIEW OF ALL THE DIFFERENT FORMATS

Thanks to the wide range of sizes available, GeoCeramica® tiles are highly versatile. Each size creates a different look: go for a sleek and calm look with 60x60 cm, or opt for a playful effect with 60x30 cm. Make your garden appear longer with the 120x30 cm plank format. Want to go big? Then the MAXXIMA 100x100 cm format is ideal. Want to go big and practical? Then the 75x75 is the perfect choice.

Mosa has been producing full-body ceramic tiles since 1883, using the purest raw materials and innovative Dutch design. We share the same origins: our factory in Nieuw-Lekkerland, where GeoCeramica® is produced, also opened in 1883, making it the oldest concrete factory in the Netherlands. The characteristic passion for ceramics is reflected in Mosa's timeless aesthetics. For decades, Mosa has been a rewarding starting point for designers and architects. Mosa stands for the very best in Dutch design, a value that perfectly matches the craftsmanship behind GeoCeramica®.

# 4

**GeoSteen®**

Colorfast concrete blocks with natural granulates

## GeoSteen®

MBI is the inventor of decorative paving with a high-quality top layer. This consists of colorfast, natural granules for years of beauty. The concrete tiles are in a category of their own with unique advantages. They offer better color fastness than traditional concrete blocks, better functionality than natural stone, and larger sizes than brick. GeoSteen® offers a combination of the most sought-after properties. With many different textures, colors, and sizes, there is a suitable tile for every garden style.

GEOSTEEN® GEOCORSO BARI

This contemporary garden in Grou, Friesland, strikes a perfect balance between comfort, atmosphere, and modern design. The design consists of a mix of organic and clean lines. The combination of these clean lines with warm materials and lush greenery makes this garden a place where you can effortlessly relax.

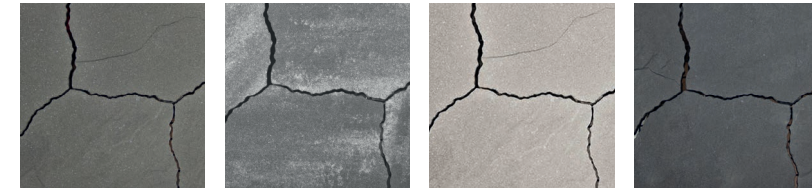

#moometMBI

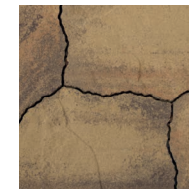

1 GeoSteen® GeoStretto Alivo Lazise

# GeoSteen® Product Range

## GEOARDESIA ALIVO

Cannobio Elba Lazise Milano

Riviera

GeoArdesia Alivo is a tile with a natural slate profile that brings your garden to life. This organically shaped tile is colorfast, dimensionally stable, wear resistant, and very comfortable thanks to Footcomfort®. They are also relatively easy to maintain, partly due to the **Protection Plus factor 25**. Create a lively, romantic garden with GeoArdesia Alivo.

## GEOSTRETTO ALIVO

Elba Lazise Milano Riviera

As a counterpart to the organically shaped GeoArdesia Alivo, we have the GeoStretto Alivo. This tile has a sleek top layer with five asymmetrical sides and **Protection Plus factor 25**. The lively color nuances of the tile combined with the sleek lines create an attractive contrast that fits perfectly in a modern garden.

#moometMBI

1 GeoSteen® GeoCorso Pescara

2 GeoSteen® GeoCorso Parma

3 GeoSteen® GeoArdesia Alivo Milano

In Meppel, sleek and playful come together beautifully. The GeoCorso Parma creates a sleek interplay of lines in the front garden and on the terrace. This is playfully interrupted by an organic garden path made of GeoArdesia Alivo Milano. The dark color of the garden path provides a beautiful contrast with the rest of the space. The result is a modern garden with a unique, lively character.

The Duinvilla's at EuroParcs Texel are the perfect place to relax and enjoy the Texel outdoors. GeoCorso Pescara tiles were used for the terraces. These tiles complement the various materials used in the villas. The use of straight, neutral tiles creates a sense of calm in the multifunctional garden.

Stylish and unparalleled design, now also available for your driveway. Our brands include a 2Drive collection. For medium duty up to 1500 kg, there is the 6 cm thickness, and for heavy duty above 1500 kg, there is the 8 cm thickness. The photo shows a GeoCorso driveway. 2Drive tiles are also available in the GeoCeramica® and Basicsteen collections. Create cohesion between your garden and driveway with 2Drive tiles.

Milano

The Citta Klimata is a climate-adaptive stone with an innovative design. The rounded stones give the impression of loose stones, but are connected to each other beneath the surface. This creates a strong stone with a natural, authentic look. With no less than 20% open space, the stone ensures high water infiltration and plenty of room for greenery. The top layer is made of natural materials supplemented with high-quality, durable color pigments. Go for a natural look for your driveway with one of the three available colors. The Citta Klimata is suitable for driveways, garden paths, and parking spaces.

Discover the modern, climate-adaptive EcoStrook. The straight lines of the stone create an attractive and modern interplay of lines. The empty space between the strips provides room for more greenery, creating a lively outdoor space and supporting biodiversity. The EcoStrook is suitable for driveways and parking spaces. With three different colors to choose from, you can select the strip that best suits your outdoor space.

### Driveway options

There are different options for paving your driveway. You may choose between climate-adaptive stones with open space, tiles or small size stones.

## Driveway options

### CLIMATE-ADAPTIVE PAVING

The various climate-adaptive stones in our range are a smart, future-proof choice for your driveway. Thanks to the open space, rainwater can easily infiltrate the soil, preventing waterlogging. The greenery that grows through the open spaces provides cooling in hot weather and gives the driveway a natural look. The cobblestones, water-permeable thick format, Citta Klimata, and EcoStrook each have a different look. This means there is a climate-adaptive stone for every driveway.

### GEOCERAMICA®

In addition to tiles for your garden or balcony, we also offer Geoceramica® tiles for your driveway. These tiles are available in various designs, so that your driveway blends in seamlessly with the other tiles. Geoceramica® 2Drive tiles are 6 cm thick, making them strong enough for your driveway. With Geoceramica® tiles, you can create the look of stylish ceramic tile flooring with a strong concrete base. Geoceramica® tiles are low-maintenance, have a long lifespan, and are available in many different designs.

### GEOSTEEN®

Just like Geoceramica® tiles, GeoSteen® tiles are also available for driveways. With a tile thickness of 6 cm, these tiles are suitable for medium duty, making them perfect for driveways. The top layer of these tiles consists of colorfast, natural granules that remain beautiful for a long time and are easy to maintain. GeoSteen® tiles are available in different textures: flat, profiled, or slightly washed. Combine 2Drive tiles on the driveway with the 4 cm version of the same tile on the patio for a seamless transition between outdoor spaces.

This organic garden in Assen is the ideal example of how GeoArdesia Alivo comes into its own. The combination of natural materials and warm tones creates a playful, romantic look. With space for rest, relaxation, and lots of greenery, this is a wonderful garden to spend time in.

#moometMBI

1 GeoSteen® GeoArdesia Alivo Riviera

2 GeoSteen® GeoCorso Bari

The nuanced GeoCorso tile is a perfect fit for this garden in Middenbeemster. Laying the tiles in different places in the garden creates cohesion. The sleek design is made more playful with the stepping stones in the grass, which looks extra green thanks to the cool Bari shade. With a protection factor of 40, this garden can be enjoyed for years to come.

## Basicsteen

Affordable concrete tiles with MBI quality

BASICSTEEN TRIPPEL T KOVA NUANCE

## Basicsteen

Basic stones are the entry-level products in the MBI collection. These stones are high quality and affordable. The top layer of Basic stones consists of high-quality pigments instead of natural granulates. No pigments are added to the gray color; this is the natural look of the stone. Only high-quality color pigments are used for the other colors. With the different sizes and even climate-adaptive stones, there is a suitable option for every project. Make your design dreams come true with the Basic stone.
